

# Buloke

## Malting Barley

### VARIETY SUMMARY

- Accredited Malt variety in NSW, VIC, SA and WA
- Early to midseason variety similar to Schooner.
- Yielding 5% -10% higher than Schooner, Sloop, SloopSA and SloopVic in low to medium rainfall areas.
- Straw strength is evaluated as average and moderately tall in height.
- Grain plumpness is intermediate between Schooner and Gairdner.
- Susceptible to CCN

### BREEDING

Franklin/VB9104/ VB9104  
Bred by David Moody, Senior Barley Breeder, Department of Primary Industries, Victoria, Horsham through the Malting Barley Quality Improvement Program (MBQIP).

### MATURITY

Buloke is an early to midseason maturing variety. Buloke flowers at approximately the same time as Schooner and about 3-4 days later than SloopSA. Limited data suggests Buloke is a few days later flowering than Schooner in central NSW.

### DISEASE RESISTANCE

**Table 1.** 2010 disease ratings for Buloke

	Scald	Spot Form Net Blotch	Net Form Net Blotch	Powdery Mildew	Leaf Rust	BYDV
NSW	MS	MS-S	MR	MR	S-VS	-
VIC	MS	MS-S	MR	MR	S	S
SA	MS	MS-S	MR	MR	S-VS	S
WA	MS	MS	MS	MR	S	MR-MS

Disease terms: R - Resistant, MR - Moderately Resistant, MS - Moderately Susceptible, S - Susceptible, VS - Very Susceptible

### PLANT CHARACTERISTICS

Buloke is a moderately tall variety with good straw strength and good head retention. Early growth does not appear as vigorous compared to the Sloop varieties.

### AREA OF ADAPTATION

Broadly adaptable, Buloke is best suited to the low – medium rainfall (325mm+) districts of southern Australia. Buloke is a high yielding alternative to Schooner, Sloop, SloopVic, SloopSA and Flagship in these areas.

Buloke has equalled and exceeded existing malting varieties in the low – medium rainfall areas of southern Australia.

Areas of adaptation include the low to medium rainfall zones of Western Australia, South Australia, Victoria, New South Wales and Tasmania.

### GRAIN QUALITY

Ideal malt quality barley.

Grain plumpness of Buloke is similar to Schooner and superior to Gairdner.

Buloke is a variety that has high diastatic power and high fermentability, consequently it is most suitable for starch adjunct brewing. This style of brewing is common in Asian countries where starch (corn or rice) supplements malt in the brewing process. For brewers, Buloke will have similar performance to Baudin and Flagship.

### AGRONOMIC GUIDELINES

A detailed Malt Barley Management guide is available from the AWB Seeds website: [www.awbseeds.com.au](http://www.awbseeds.com.au)

 YIELD**Table 1.** Long term yield performance (2000-09) in NSW

 PLANT BREEDER RIGHTS AND ROYALTIES

Buloke is protected by Plant Breeder's Rights (PBR); any unauthorised commercial propagation or any sale, conditioning, export, import or stocking of propagating material of this variety is an infringement under the Plant Breeder's Rights Act 1994.

Growers are allowed to retain seed from production of this variety for their own use as seed only. An End Point Royalty of \$2.20 per tonne (GST inclusive), which includes breeder royalties, applies to this variety.

**ACKNOWLEDGEMENTS**

Buloke was bred by the Victorian Department of Primary Industries (Horsham) with support from Malting Barley Quality Improvement Program (MBQIP), Grains Research Development Corporation (GRDC) and growers across southern Australia.
